

Brass Hose Barb Fittings

Features and Specifications for Brass Hose Barbs

The brass hose barb fittings by Polyconn are made of 360CA brass. These are recommended to be used in industrial markets like water, air, and other low pressure applications. Hose barbs are typically used with rubber hose or thermoplastic hose, and even in some cases polyurethane tubing. Typical working pressure for hose barbs is 150 PSI. However, it is important to note the pressure rating of the hose or tubing being used. Polyconn always recommends the use of hose clamps or other retention devices to secure the hose to the barb fitting.

SPECIFICATIONS

Product	Operating Pressure	Temp. Range	Media
Brass Hose Barb	Up to 150 PSI	-40°F to +160°F	Air and Liquids compatible with materials of construction.

FEATURES

- * Small, Curved, and T-Shaped.
- * One end has a stub with ridges that secures the fitting when it is inserted into a hose.
- * Fittings can be used to join two or more pieces of piping.

USES

- * For use with hose clamps or crimped ferrules to attach various types of flexible tubes.
- * Connect straight pipes and flexible tubing systems.
- * Different sizes and shapes designed to regulate liquid flow.
