

Custom Kitting & Custom Assemblies

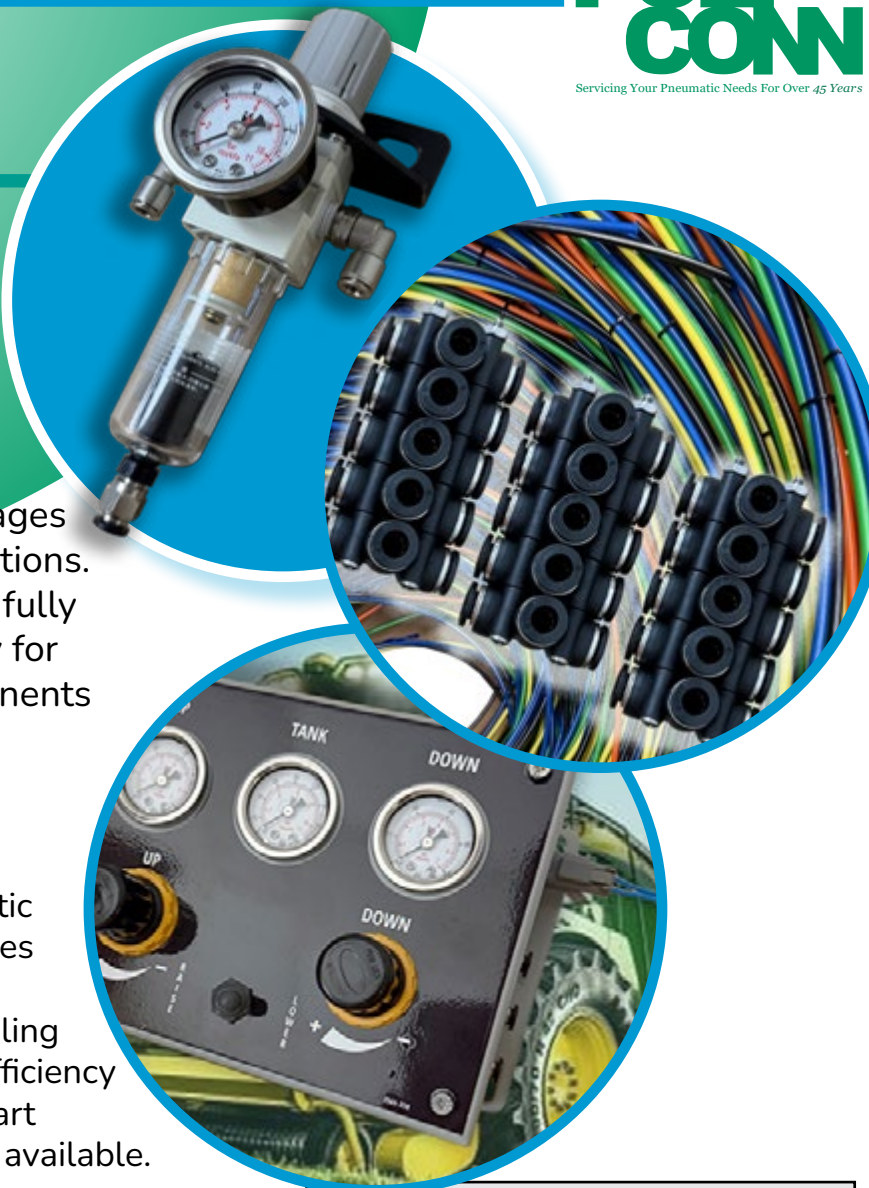

Polyconn offers **Kitwair**[®] kitting and assembly services designed to simplify your production processes. Our Kitwair solutions streamline manufacturing and inventory management by preparing complete kits and packages that match your project's specifications. Kits and assemblies are delivered fully tested, quality-assured, and ready for use with all the pneumatic components your application requires.

Custom Kitting

Our custom kits can include pneumatic fittings, tubing, valves, and accessories grouped and packaged for specific installations. This helps reduce handling steps, prevent errors, and improve efficiency at the point of use. Custom labels, part numbers, and packaging options are available.

Custom Assemblies

Custom assemblies are built using Polyconn-supplied components, including manifolds, pre-cut specialty tubing, and other hardware. Each assembly is produced to exact specifications and quality-checked before shipment. This service is ideal for OEMs, distributors, and industry-specific manufacturers who want to minimize in-house labor or standardize system builds. Repeat orders are consistent and ready to install.
