

AIR FilterSAVER

Engineered for Extremes, Built to Last.

AIR FILTER SAVER

The Air Filter Saver is a revolutionary method of cleaning cylindrical air breathing filters utilizing a precision machine rotating nozzle. The Air Filter Saver uses pressurized air from an ordinary shop air compressor (or service vehicle). Three arms deliver 360° of pressurized air, never allowing the filter to receive a direct blast.

The Air Filter Saver is designed to run only when placed properly inside the filter and in the VERTICAL POSITION only. Safety glasses and extreme caution are recommended.

NEVER EXCEED 130 PSI

The Air Filter Saver contains Licensed Products with United States Patent No. 8,668,782 and United States Patent No. 9,480,941. Patents are licensed to Polyconn by Gita Green Inc.

- The Air Filter Saver is making an impact on being environmentally responsible for generations to come

- Customize the Air Filter Saver to your Filters!
- Simply trim nozzle tubing according to the measurement guide provided
