

Filters Regulators Lubricators

Features

- Light weight
- Modular
- Economical
- Compact size

Application

Polyconn's industrial air preparation systems are now lighter, smaller, and more economical. Using a more modular design and an integrated gauge.

Compressed air systems are prone to impurities such as dirt, pipe scale, moisture, rust, compressor oil, and more. Applying filters, regulators, and lubricators to your system removes these contaminants, expands the lifespan of your tools, and leads to a more efficient operation to save you time and money. FRLs are often used in semiconductor manufacturing.

Package quantities may apply.
